

Excel Data Cleaning and Transformation

1) Handling Missing Values

Missing values in Price and categories

The missing values in the dataset would be marked as **Missing** through the **Go To** dialog box, where all the blanks could be filled up.

2) Correcting Inconsistent Data:

- Inconsistent product name and Typos in the category column could be corrected through **Find and Replace**.
- Also Inconsistent product name could be standardised using the proper()

3) Removing Duplicates:

Data → Remove Duplicates → Select all columns → OK

4) Splitting and Merging Data:

A. Product ID → Manufacturing Date + Country Code

Manufacturing Date

=LEFT(A2,6) and drag the rest of the cells.

Country Code

=RIGHT(A2,2) and drag the rest of the cells.

B. Brand Name + Product Name → Product Brand

=CONCAT(C2," ",G2)

5) Number Formatting:

Format the data type of the "Price" column to currency format

- Select the **Price (\$)** column.
- Home → Number → Currency

Format the "Manufacturing Date" column to display dates in the "DD-MM-YYYY " format.

Select the manufacturing date cell and provide the formula

=DATEVALUE(LEFT(A2,6)&"-2026")

Then format with the short date option to format by the "DD-MM-YYYY " format.

6) Conditional Formatting

A. Price Data Bar / Colour Scale

Select the price range

Home → Conditional Formatting → Data Bars

B. Highlight Electronics

Select the Category range

Go to:

Home → Conditional Formatting → Highlight Cells Rules → Text that Contains
